KITRIVO LABORATORY MANUAL

Model: DICT-9000X | Advanced Digital IC Trainer Kit

Department of Electronics & Communication Engineering

LIST OF EXPERIMENTS:

1. Verification of Truth Tables of Basic Logic Gates (AND, OR, NOT, NAND, NOR, XOR)

2. Design and Implementation of Half Adder and Full Adder Circuits

3. Realization of Multiplexers and Demultiplexers using TTL 74 Series ICs

4. Study of Synchronous and Asynchronous Binary Counters

5. Design of 4-bit Shift Registers and Ring Counters

SAFETY INSTRUCTIONS & OPERATING PROCEDURES:

- Ensure 230V AC main supply is properly grounded before powering on the kit.

- Never apply external DC supply higher than +5V to TTL logic IC breadboard socket.

- Use provided patch cords for making connections between logic switches and LED indicators.
